|| North America || Gun Violence in America: What Biden-Harris Propose to Do About It: Rightly They Have Declared It a Gun Violence Public Health Epidemic ||

|| Thursday: April 08: 2021 || á. Today, the Biden-Harris Administration has announced six initial actions to address the gun violence public health epidemic. Followed by the recent high-profile

mass shootings in Boulder, taking the lives of 10 individuals and in Atlanta, taking the lives of eight individuals, including, six Asian American women, underscored the relentlessness of this epidemic. Gun violence takes lives and leaves a lasting legacy of trauma in communities every single day in America, even, when it is not on the nightly news. In fact, cities across the country are in the midst of a historic spike in homicides, violence, that disproportionately impacts Black and brown Americans.

Mr Joe Biden has expressed his commitment to taking action to reduce all forms of gun violence, community violence, mass shootings, domestic violence and suicide by firearm. President Biden has today reiterated his call for Congress to pass legislation to reduce gun violence. Last month, a bipartisan coalition in the House passed two bills to close loopholes in the gun background check system. The President invited the Congress to close those loopholes and go further, including, by closing 'boyfriend' and stalking loopholes, that currently allow people, found by the courts to be abusers to possess firearms, banning assault weapons and high capacity magazines, repealing gun manufacturers' immunity from liability and investing in evidence-based community violence interventions.

Mr Biden has asked the Congress to pass an appropriate national 'red flag' law, as well as, legislation incentivising states to pass 'red flag' laws of their own. "But this Administration will not wait for Congress to act to take its own steps, fully within the Administration's authority and the Second Amendment, to save lives. Today, the Administration is announcing the following six initial actions."

The Justice Department, within 30 days, will issue a proposed rule to help stop the proliferation of 'ghost guns'. America is experiencing a growing problem: criminals are buying kits, containing nearly all of the components and directions for finishing a firearm within as little as 30 minutes and using these firearms to commit crimes. When these firearms turn up at crime scenes, they, often, can not be traced by law enforcement due to the lack of a serial number. The Justice Department will issue a proposed rule to help stop the proliferation of these firearms.

The Justice Department, within 60 days, will issue a proposed rule to make clear when a device marketed as a stabilising brace, effectively turns a pistol into a short-barreled rifle subject to the requirements of the National Firearms Act. The alleged shooter in the Boulder tragedy last month appears to have used a pistol with an arm brace, which can make a firearm more stable and accurate while still being concealable.

The Justice Department, within 60 days, will publish model 'red flag' legislation for states. Red flag laws allow family members or law enforcement to petition for a court order temporarily barring people in crisis from accessing firearms, if, they present a danger to themselves or others. The President urges Congress to pass an appropriate national 'red flag' law, as well as, legislation incentivising states to pass 'red flag' laws of their own. In the interim, the Justice Department's published model legislation will make it easier for states, that want to adopt red flag laws to do so.

The Administration is investing in evidence-based community violence interventions. Community violence interventions are proven strategies for reducing gun violence in urban communities through tools other than incarceration. Because cities across the country are experiencing a historic spike in homicides, the Biden-Harris Administration is taking a number of steps to prioritise investment in community violence interventions.

::: The American Jobs Plan proposes a \$05 billion investment over eight years to support community violence intervention programmes. A key part of community violence intervention strategies is to help connect individuals to job training and job opportunities.

::: The US. Department of Health and Human Services is organising a webinar and toolkit to educate states on how they can use Medicaid to reimburse certain community violence intervention programmess, like Hospital-Based Violence Interventions.

::: Five federal agencies are making changes to 26 different programmes to direct vital support to community violence intervention programmes as quickly as possible. These changes mean America can start increasing investments in community violence interventions as the country waits on the Congress to appropriate additional funds.

The Justice Department will issue an annual report on firearms trafficking. In 2000, the Bureau of Alcohol, Tobacco, and Firearms:ATF issued a report summarising information, regarding its investigations into firearms trafficking, which is one way firearms are diverted into the illegal market where they can easily end up in the hands of dangerous individuals. Since the report’s publication, states, local, and federal policy-makers have relied on its data to better thwart the common channels of firearms trafficking. But there is good reason to believe that firearms trafficking channels have changed since 2000, for example, due to the emergence of online sales and proliferation of ‘ghost guns’. The Justice Department will issue a new, comprehensive report on firearms trafficking and annual updates necessary to give policy-makers the information they need to help address firearms trafficking today.

|| Medicine || New Research Shows Cytonemes Distribute Wnt Proteins in Vertebrate Tissue ||

|| Thursday: April 08: 2021 || á. Scientists have made a pivotal breakthrough in understanding the way cells communicate with each other. An international research team, including experts from the University of Exeter's Living Systems Institute, has identified how signalling pathways of Wnt proteins, which orchestrate and control many cell developmental processes, operate on both molecular and cellular levels.

The mechanism, controlling Wnt cytonemes at the molecular level is currently unknown. Various mechanisms exist for cells to communicate with each other and many are essential for development. This information exchange between and among cells is, often, based on signalling proteins, that activate specific intracellular signalling cascades to control cell behaviour at a distance. Wnt proteins are produced by a relatively small group of cells and orchestrate cell proliferation and differentiation but, also, cell movement and polarity of the neighbouring cells.

However, one of the most crucial functions of the Wnt signalling is patterning of the body axis, which, essentially, helps determine where the head and tail should form in a developing tissue. Previous research, led by Professor Steffen Scholpp, from the Living Systems Institute, highlighted that thin finger-like protrusions, known as, cytonemes, carry Wnts from the source cells to recipient cells.

In the new Study, Professor Scholpp's team explored the role of a key component of the PCP signalling pathway Vangl2 in zebrafish embryos. In this project, Dr Lucy Brunt, identified that Wnt

proteins activated the PCP pathway in a source cell in order to regulate cytoneme initiation and signal dissemination.

By activating this pathway via Vangl2, she induced the formation of long and branched cytonemes, which reinforced distant Wnt signalling in the neighbouring cells. Based on these data, fellow researcher Dr Kyle Wedgwood and his team developed a mathematical model to simulate this effect in a developing zebrafish egg and predicted that the patterning of the body axis is massively altered.

"And the prediction was correct." said Dr Brunt. "We found that the formation of longer cytonemes in zebrafish larvae led to a strongly reduced head and, strikingly, the fore-brain tissue was missing completely." Together with cell biologists from the National University of Singapore, the scientists showed that the mechanism they described in zebrafish embryogenesis, operated, also, in different tissues, including, human cancer cells.

Professor Scholpp said, "The exciting results of this multi-disciplinary, multi-scale project provides a step change in understanding how the Wnt signalling pathway operates at the molecular and cellular level in a living vertebrate animal.

"The data from this project will help us to understand the mechanisms, involved in controlling normal Wnt signalling, in the future. We believe that the outcome will have fundamental implications for how we could manipulate Wnt signalling during disease states."

|| Medicine || Double Dose of the Pfizer COVID-19 Vaccine Elicits Strong Antibody Immune Responses in Older People ||

|| Thursday: April 08: 2021 || α. A University of Birmingham-led Study, supported by the UK Coronavirus Immunology Consortium, has found that 98% of people over 80, who had two doses of the Pfizer COVID-19, vaccine had a strong antibody immune response. The research involved 100 people, 80 to 96, who were living independently and had received the Pfizer vaccine twice at three weeks apart. Immune measurements were taken two weeks after the second vaccination.

The largest and most complete independent study of older people's immune response to Pfizer vaccination published to date, the Study showed that, in 63% of participants, cellular T-cell responses developed and correlated with antibody response. The research, also, found that participants, who had previously had natural COVID-19 infection, had a peak antibody response after just one Pfizer vaccination. In these participants, their antibody response remained 28-fold higher, even, after the second vaccine dose.

Working with Public Health England at the Porton Down laboratory, the research team showed live Wuhan virus was strongly neutralised in serum from blood samples, taken from participants after they had two doses of the Pfizer vaccine. The levels of neutralisation reduced 14-fold when tested against the P.1 COVID-19 variant, that was first discovered in Brazil. However, the researchers are still hopeful that the levels of neutralisation shown is still sufficient to provide broad protection against this viral variant of concern.

First Author of the research Dr Helen Parry, a National Institute for Health Research:NIHR Academic Clinical Lecturer at the University of Birmingham, said, “With hopes pinned on COVID-19 vaccination playing a key role in bringing the current pandemic under control, it is essential that vaccine-induced immune responses are elicited effectively in people of older age, who we know are the most vulnerable group to COVID-19.

“However, we, also, know that the quality of immune responses, including, responses to vaccination, deteriorates with age. Although, the Pfizer vaccine has shown good efficacy in those, aged, over 75, data on the immunological responses in those, aged, 80 years and over is lacking, including, immune responses induced by the vaccine to the new COVID-19 variants of concern.

Our research provides further evidence that the mRNA vaccine platform delivers a strong immune antibody response in people up to 96 years of age and retains broad efficacy against the P.1 variant, which is a variant of concern.” UK Coronavirus Immunology Consortium Lead and Corresponding Author Professor Paul Moss, of the University of Birmingham, said, “Our data, also, shows that for older people, who have already had a natural COVID-19 infection, a single dose of the Pfizer vaccine strongly boosts the immune response. Indeed, in these people the levels of antibody remain quite a lot higher, even, after two doses of vaccine.

While we need further research to understand this finding better, it’s important that everyone still follows NHS guidelines to get two doses of the vaccine, even, if, a person thinks they may have previously had COVID-19. Meanwhile, we found cellular immune responses were less complete and were detectable only in 63% of participants. It is not yet entirely clear how important these cellular responses are for protection or for supporting antibody responses in the longer term. However, this profile must be monitored and we will continue to study this cohort.”

The research, carried out in collaboration with Public Health England and the UK Government’s Vaccine Taskforce, has been published on The Lancet’s pre-print server therefore is yet to be peer reviewed. The Study was partially supported by the UK Coronavirus Immunology Consortium, which is funded by UK Research and Innovation and NIHR.

Professor Moss said, “Taking a collaborative approach to research through the UK Coronavirus Immunology Consortium and National Core Studies has allowed us to drive forward our knowledge at an incredible pace and build our understanding of how different components of the immune system respond to COVID vaccines. This knowledge will allow us to optimise vaccination protocols and maximise protection against SARS-CoV-2 within our population.”

Dr Joanna Jenkinson, the Head of Infections and Immunity at the Medical Research Council, part of UKRI, said, “As the UK continues its rollout of vaccines against Covid-19, it’s critical we study the real-world impact of these vaccines at pace, especially, amongst the groups most affected by the virus. This Study from a group of world-leading immunologists, who have come together under the UKRI and NIHR-funded UK Coronavirus Immunology Consortium, brings much welcome

reassurance that the mRNA vaccine elicits a strong immune response in people over 80 years of age.”

The research specifically analysed the immune response to SARS-CoV-2 ‘spike protein’. For viruses like COVID-19 to survive, they have to get inside cells in order to replicate and build new virus particles and spread to other cells. Coronaviruses are surrounded by a fatty membrane and in order to gain entry to the inside of a cell they use something known as a ‘spike protein’ to fuse the membrane to a cell and take over the cell.

The spike protein of SARS-CoV-2 is stuck on a roughly spherical viral particle, projecting out into space and ready to cling on to unsuspecting cells. Given how crucial the SARS-CoV-2 spike protein is, some COVID-19 vaccines, known as, mRNA vaccines and includes the Pfizer vaccine, have been designed to give instructions to our immune system to make our own version of the spike protein. Production of the spike inside our cells then starts the process of protective antibody and T-cell production.

|| Political Economics || Poland to Build the First Recycling Plant For Car Batteries ||

|| Thursday: April 08: 2021 || á. With the help of a loan of up to €25 million from the European Bank for Reconstruction and Development:EBRD, Poland will become the site of the first facility in the European Union for recycling both car batteries and other waste containing metals, in response to the rapid rise of electric vehicles. EBRD financing for Elemental Holding SA will be part of a wider package raised to finance the construction of the pioneering facility, which will be one of the first in the world to treat spent lithium-ion batteries for electric vehicles and other waste containing metals that are critical for e-mobility.

Elemental Holding SA. is a Polish company engaged in the collection and recycling of platinum-group metals and electrical waste and has a worldwide presence. The company has operations in Poland, other European countries, the Middle East and the United States of America. Mr Frederic Lucenet, EBRD Director, Manufacturing and Services, said, "This is an outstanding example of how new technology and progress with the green economy are working hand in hand. EBRD is actively supporting Poland's ambitious agenda to become a low-carbon economy and has already financed several large e-mobility projects with domestic and foreign investors."

Mr Michal Zygmunt, the Vice-President of Elemental Holding SA said, "The project reflects the strategy of Elemental Holding focusing on the recovery and refining of critical raw materials, with the application of low-carbon-footprint technology and innovations."

The facility entails the deployment of state-of-the art innovative technology supplemented and co-financed by the Polish National Centre for Research and Development:NCBR with the support of the European Commission. The plant will produce secondary metals and other materials that can be reused as raw materials for new batteries or other applications, providing an essential service in the lithium-ion batteries value chain.

These batteries are a core component of electric vehicles, sales of which are forecast to overtake those of petrol and diesel-powered cars as the transition to a low-carbon economy progresses. The project will reduce greenhouse gas emissions and support the circular economy in the e-mobility sector.

The production and use of recycled batteries and metals can lead to carbon savings as high as 98% compared to their primary counterparts, as well as, to a more efficient use of scarce natural resources. The project benefited from technical cooperation support provided by the TaiwanBusiness-EBRD Technical Cooperation Fund and Spain.

To date, the EBRD has invested €10.8 billion in 456 projects in Poland. The Bank is a leading investor in the renewables sector and has previously co-financed two battery investments for electric vehicles in the country.

|| England || Siemens Mobility and University of Birmingham Announce Railway Research and Innovation Partnership ||

|| Wednesday: April 07: 2021 || α. Siemens Mobility and the University of Birmingham have signed a Memorandum of Understanding to establish a centre of excellence for rail research and innovation in Goole, East Riding of Yorkshire. As founding partners in the UK Rail Research and Innovation Network:UKRRIN, this latest development is a natural progression for the two partner organisations.

The facility, with an investment of up to £50 million and creating up to 250 direct and supplier jobs, will be built as part of the second phase of an innovation hub, known as, the Rail Accelerator and Innovations Solutions Hub for Enterprise:RaisE. It is aimed at accelerating the adoption of technology within the rail industry and will provide practical and virtual training, prototyping labs and focus on industry innovation - including future and advanced technologies, such as, robotics and programmed algorithmic machination:PAM.

RaisE will spotlight decarbonisation and alternative traction technologies, such as, battery and hydrogen to drive forward the UK's net-zero agenda, as well as, increasing the reliability and availability of the railway, using the latest digital solutions. It incorporates the opportunity for increased skills development by creating a digital systems skills academy, building on Siemens

Mobility's industry-leading expertise and Birmingham's status as Centre of Excellence in Digital Systems within UKRRIN.

Mr William Wilson, CEO of Siemens Mobility Limited, said, "We are delighted to be working with the University of Birmingham on these exciting plans to take rail innovation in the UK and beyond to the next level. This is a development of international significance. It not only delivers on the levelling up agenda but gives clear signals to the wider industry that the UK is at the forefront of railway innovation, research and development and is open for global collaboration."

Professor Tim Jones, the Provost and the Vice-Principal at the University of Birmingham, said, "Signing this MoU further strengthens our partnership with Siemens Mobility and builds upon our world leading railway expertise based out of our new, state-of-the-art Centre of Excellence in Digital Systems and School of Engineering. We are looking forward to further developing our joint plans for this exciting centre in the coming weeks."

Mr Sambit Banerjee, the Managing Director Rolling Stock and Customer Services for Siemens Mobility Limited, said, "This is real and demonstrable progress of plans to turn Goole into the railway hub of the future and make the most of the talent there is in the local area. For us, Goole is about much more than railway manufacturing. It's about creating an internationally recognised hub of railway excellence and I'm delighted that the University of Birmingham shares this vision."

In total RaisE will occupy a five-acre site. Construction of the first phase, comprising offices for East Riding Council, Siemens Mobility and The Rail Alliance part of the Birmingham Centre for Rail Research and Education at the University, with additional space for SME occupants and collaborative working areas, is due to open in 2022. This latest development, Phase Two, is planned to open a year later.

In addition to the opportunities created by RaisE, Siemens Mobility's Goole rail manufacturing plant will create up to 700 direct jobs and an additional 1,700 indirect supply chain opportunities. It is scheduled to open in 2023 with the first trains being manufactured on-site destined for London Underground's Piccadilly line. The new centre complements the manufacturing site with plans to implement live test bed, living lab concepts to trial innovative new technologies and increase their adoption as quickly as possible.

What Are Building-Block Foundational Human Rights

Ask Your Political Leaders About Building-Block Foundational Human Rights and Ask Them About Humanics

The Building-Block Foundational Human Rights

- A: Absolute Right to Live in Clean, Healthy, Safe and Natural Environment
- B: Absolute Right to Breathe Natural, Fresh, Clean and Safe Air
- C: Absolute Right to Necessary Nutritional Balanced Food and Drink
- D: Absolute Right to Free Medical Care at the Point of Need
- E: Absolute Right to an Absolute Home
- F: Absolute Right to Free Degree-Level Education and Life Long Learning
- G: Absolute Right to Guaranteed Social Care
- H: Absolute Right to a Universal Income
- I: Absolute Right to a Job
- J: Absolute Right to Dignified Civic and Human Funeral Paid Through by Universal Income

This Is the Body of Work, by Munayem Mayenin, That Has Brought Into Existence the Philosophy and Vision of Humanics

Dehumanisation of Humanity: Volume One: Published: July: 2007: 978-1-4477-1330-2

Mayenin worked and developed the very critique of capitalism and Marxism while at university in which he had envisioned the world's future in humanics for humanity to reach and achieve liberty and equality for all humanity, which capitalism has continually slaughtered and Marxism failed desperately, even, to understand, let alone, to know or show how to seek and achieve them. Some of these works were published in publications in the early 00s and the volume was published as a book in 2007. There are three other volumes of this planned work, yet to be published.

Humanics The Foundation: Volume One: Published: December 06: 2017: ISBN: 978-0-244-34575-4

This piece of work elaborated the philosophy of humanics and presented the idea of human enterprise and how it works to enable humanity to conduct the human economical endeavours in humanics.

Humanics The Humaniconomics: Volume Two: Published: June 12: 2018: ISBN: 978-0-244-48334-0

This is the political economics or humaniconomics of humanics in human enterprise. This volume presents the political economics of humanics and envisioned world's future as two distinct phases: pre-humanical or Kapitalawnomics phase in which capitalism is saved from pseudonomics and brought under the absolute and complete control and power of the rule of law so to make it serve the people at all times and not the rich and through this phase, humanity brings into existence the humanical Building-Block Foundational Human Rights and end capitalism's Poverty Paradigm, that causes all of the high-cruelties, high-brutalities and high-barbarities, that are inflicted on the vast number of humanity on this earth. Further to this, this work advances the system and mechanism of human enterprise and envisioned at the end of the development of Kapitalawnomics human societies will have developed enough to be able and equipped to try and seek to bring into existence humanical societies, that will begin to form a grid of humanical societies into a universal humanical civilisation on earth.

The Humanics Elleesium Declaration 2019: The Humanicsxian Manifesto: Published: April 06: 2019: ISBN: 978-0-244-76474-6

This short piece of work nano-summarised the entire body of Munayem Mayenin's works on humanics. This calls on the working humanity of the world to rise, organise and united under new and humanical political forces, parties and organisations to seek and try to bring about a humanical world movement to lead humanity to equality and liberty.

Humanics The Humanicsovics: Volume Three: To Be Published Later This Year

This volume presents the political philosophy of humanics and the means to deliver that political philosophy by and through humanicsovics, humanical direct form of democracy without party politics whereby each and every individual human being becomes his:her own High

Representative and they all run their society's human affairs management together as individuals, working together as scientists and mathematicians without any political parties.

Alphansum Sovereign Necessarius: Published April 14: 2020: ISBN: 978-0-244-58241-8

Although, this large volume is of metaphysical work, it has brought the whole humanical universal view in a harmonious outlook, unifying all expressions, fields, areas and arenas of human existence and in this process this work envisioned the coming into existence the new branches of science, that has already been mentioned.

Laranska The Anatomy of Fear: Novel: Published: January 2009: ISBN: 978-1-4477-1426-

2

No Man's Land's Bloom: Play: Published: May 2010: ISBN: 978-1-4477-0903-9

United Colours of Blood: Screenplay: Published: January 2009: ISBN: 978-1-4477-1615-0

Larantia Poetry of Anatophysiophilosophicamonimayareginata: A Magnum of a Planned Volume of 850 Sonnets About All Branches of Medicine: Currently Having Few Hundred Sonnets: First Published: October 14, 2016: ISBN: 978-1-326-28882-2

In his other major bodies of works, that are yet to be published Mayenin has worked on further in elaborating the psychology and social psychology of the zoohumanity, that capitalism and all the dehumanisations it has inflicted on humanity through its enforcement of inequality and the absence of liberty. These as yet unpublished works include: Psychology of Zoohuman, Humanical Jurisprudence, Sociology of Evil, Economics of Squalors: The High-Cruelties High-Brutalities and High-Barbarities of Capitalism, Humanical Moral Science, Social Morality Or Good State, Humanical Civilisation: A Universal Grid of Humanical Societies and Colossus Complexus: Eternally Learning Humanity.

Because humanity does not just exist on earth but it does so in the Sunnara, in the Home Bay of the Milky Way Galaxy in the vast expanse of the

Universe, our home Universana. Dear Reader, we are on the path of humanics, please, tell the world and world humanity that humanics has arrived on earth from ‘the without of human imagination’, learning, questioning and thoughts, gained from the eternal walks of this human soul’s eternal journey on the eternal path of eternal learning, with its humanical metaphysics, humanical philosophy as natural science, humanical psychology, humanical political philosophy, humanical political economics, humanical jurisprudence, humanical sociology, humanical moral science and humanical arealism. For capitalism has created global warming and climate change and wracked the earth with environmental degradations and pollutions in all spheres, where bio-diversity is getting lost at an alarming rate as the earth keeps on being heated up. Humanity is devastated by capitalism’s poverty-paradigm, delivering all its high-cruelties, high-brutalities and high-barbarities. This is why it is paramount that that we speak up and out and try our hardest to inspire faith, hope, determination and resolution among all humanity of this world, women and men, that we shall not just accept this ‘sentence of doom’, that capitalism’s mindless consumerism, infinite greed of infinite profiteering, decadent voguism and venomous voyeurism, orchestrated by the Distorteddia have brought us and, yet, that we can, we should, we ought, we must keep on trying: ‘to seek to try: to do: to change: to make better the human condition’ and we do so as one humanity, as women and men, working together as one, in unison with the same aim, same goal, same objective: to get all humanity to liberty, equality, fairness and justice in the rule of law in natural justice, with a purpose and meaning to our existence, where we all humanity, with our all-unity and all-diversity, exist as one humanity naturale on one Mother Earth, in one Sunnara, in one Home Bay Milky Way Galaxy in the one Universana with the humanical foundation of faith: humanity is an infinity unfolding itself, in which, we are all-for-one and one-for-all.
